No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The present invention relates to new NOVX polypeptides. The invention is useful for treating or preventing a NOVX-associated disorder such as cardiomyopathy or atherosclerosis, where the disorder is related to cell signal processing and metabolic pathway modulation in a subject, preferably human. The invention is also useful for treating metabolic disorders (e.g. obesity), diabetes, infectious disease, neurodegenerative disorders, haematopoietic disorders, preventing or preventing of the invention are also useful for treating or preventing distributions and useful for treating or preventing distributions. Constituted the invention are also useful for treating or preventing distributions, cancers, acre, hair growth, pigmentation disorders, endocrine disorders, respiratory disease, gastro-intestinal diseases, reproductive, health, caurological diseases, bone marrow transplantation, endocrine diseases, allergy and inflammation, nephrological disorders, urinary system disorders neuropsychiatric disorders and age-related disorders. The present nuclear acid sequence represents a NOVX gene. This sequence encodes a NOVX protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ×
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Ö

The invention featers to an isolated polypeptic comprising vocurring amino acid sequence at least 90% identical to GGDD, a biologically active comprising an immunoperic fragment. Also included are the fragment or an immunopenic fragment. Also included are the cragment or an immunopenic fragment a recombinant polymuclectide comprising a promoter sequence operably linked to the GGDD pull promoter sequence operably linked to the GGDD pull promoter sequence operably linked to the GGDD pull promoter sequence operably linked to the GGDD pull promoter sequence operably linked to the GGDD pull promoter sequence operably linked to the GGDD pull promoter or alter the expression of GGDD pull promoter are useful for diagnosing, treating or antiquorables are useful for diagnosing, treating or greventing disorders associated with aberrant expression of GGDD, particularly cell proliferative (e.g. arteriosclerosis, atherosclerosis, particularly cell proliferative (e.g. arteriosclerosis, atherosclerosis, or infertilis, parcoxysmal nocturnal haemoglobinuria, polycythaemia vera, psoriasis, primary thromobocytopaenia or cancer), developmental disorders (e.g. than acidosis, anaemia or mental retardation), cell sorders (e.g. Alzheimer disease, Parkinson's disease or epilepsy), reproductive disorders (e.g. infertility or a disruption in the measure and cycle), or autoimmune/inflammatory disease, diabetes mellitus, contact dermatitis, crohn's disease, diabetes mellitus, contendericiency syndrome, allergies, athematoid arthritis, or viral, bacterial, fungal, parasitic, protozoal or helminthic contact dermatitis, fundal, parasitic, protozoal or helminthic contact dermatitis, or stepoporosis, panceratitis, and acid attribute of infections. They are also useful in the assessment of the effects of infections of the effects of the mental and acid of the effects of the mental and acid of the effects of the mental and acid of the effects of the mental acid of the effects of the mental acid of the effects of the mental acid of the effects of t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       exogenous compounds on the expression of nucleic acid and amino acid sequences of proteins associated with CGDD. The present sequence encodes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        assessment of the effects of
f nucleic acid and amino acid
invention relates to an isolated polypeptide comprising CGDD1-12
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CGDD protein

The present sequence is a coding sequence for a NOV protein. The NOV proteins and coding sequences are useful for treating or preventing NOV-associated disorders or in the manufacture of a medicament for treating the disorders, such as cancer, heart disease, inflammation, autoimmune disorders, allergies, blood disorders, AIDS, diabetes, obesity, asthma, 1gA nephropathy, cirthosis, arthritis, Albahamer's disease, inflections (e.g. bacterial, viral, parasitic), stroke, muscular dystrophy, epilepsy, and other wasting disorders associated with chronic diseases. NOVI is a

anticonvulsant; antiarthitic; immunosuppressant; immunostimulant; dermathological; immunosuppressant; antidiabetic; hypotensive; dermathological; immunosuppressive; antidiametory; antibacterial; antiviral; antifungal; antintemmatic; antithyroid; and antibacterial; sequences can be used for determining the presence of or predisposition to, or preventing or treating pathological conditions associated with an ORFX associated disorder. The nucleic acids can be used to express ORFX proteins in gene therapy vectors. The proteins and nucleic acids may be used to treat cancers, proliferative disorders, neurodegenerative disorders osteoarthritis, graff ve host disease, cardiovascular disease, diabetes mellitus, hypertension, hypothyroidism, cholesterol ester storage, systemic lupus erythematosus, severe combined immunodeficiency
                                                                                                                                                                                                                                                                                                                                                                                                                                                         (SCID), AlDS, viral, bacterial or fungal infection, malaria, autoimmune disorders, asthma, allergies, aplastic anaemia, burns, wounds, bone and cartilage damage, nocturnal haemoglobinuria, antiinflammatory disease; to enhance coagulation; to inhibit thrombosis; and as a contraceptive
                                                                   AAC74446 to AAC77606 encode the proteins given in AAB40237 to AAB43397, which represent the human ORFX open reading frames 1 to 3161. The ORFX sequences have activities such as: cytostatic; hepatotropic; vulnerary; antipsoriatic; antiparkinsonian; nootropic; neuroprotective; osteopathic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CGCCTCTTCAGGAAGTGGTTCGCTGCAGCCCCAGACCTGTCCTATTATTTCATTTGGGAC 219

biological sample. The present sequence encodes human NOV15c, which is located on chromosome 4 М В RESULT 6 ABQ82346 Score: SSX8 d g g à 셤 ਨੇ g à 셤 8 à ਨੇ The present invention describes novel human proteins designated NOVX, where X is 1 to 20 e.g. NOVI. NOVX sequences can have neuroprotective, cytostatic, anticonvulsant, cerebroprotective, nootropic, cardiovascular, antidiabetic, antiinflammatory, antiheumatic, antiarthritic, virucide, immunosuppressive, antiallergic, antianaemic, antibacterial, fungicide, protozoacide and antihelminthic activities, and can be used in gene therapy. The NOVX proteins, nucleotides or antibodies can be used in the manufacture of a medicament for treating a syndrome associated with a human disease selected from NOVX-associated disorder, such as cancers (e.g. leukaemia, lymphoma, melanoma or cancer of the liver, lung, muscle, ovary, testis and uterus), meurological disorders (e.g. epilepsy, stroke, ischemic cerebrovascular disease, Alizheiner's disease or pick's Spytek KA, Li L, Wolenc AR, Vernet CAM, Eisen A, Liu X; Malyankar U, Shimkets RA, Tchernev VT, Spaderna SK, Gorman L; Kekuda R, Patturajan M, Gusev V, Gangolli EA, Guo X, Shenoy S; Rastelli L, Casman SJ, Boldog F, Burgess CE, Edinger S, Ellerman K; Gunther E, Smithson G, Millet I, Macdougall JR; associated disorders, such as cancers, neurological disorders, disorders of vesicular transport, gastrointestinal disorders, and autoimmune diabetes mellitus, Grave's disease, gastrointestinal disorder, vaccine; ulcerative colitis; gastric disorder; duodenal disorder; infection; autoimmune disease; allergic reaction; autoimmune haemolytic anaemia; rheumatoid arthritis; gene; chromosome 4; ss. New NOVX polypeptides and polynucleotides useful for treating NOVX-associated disorders, such as cancers, neurological disorders disorders of vesicular transport, gastrointestinal disorders, and autoimmune diseases

The present invention describes novel human proteins designated NoVX, where X is 1 to 20 e.g. NOVI. NOVX sequences can have neuroprotective, cytostatic, anticonvulsant, cerebroprotective, nootropic, cardiovascular, antidiabetic, antidiahetic, antidiahetic, antidiahetic, antidiahetic, antidiahetic, antidiahetic, antidiahetic, antidiahetic, intucide, immunosuppressive, antidiahetic, antidiahetic, virucide, immunosuppressive, antidiahetic, antidiahetic, virucide, protozoacide and antihelminthic activities, and can be used in gene therapy. The NOVX proteins, nucleotides or antibodies can be used in the campacture of a medicament for treating a syndrome associated with a human disease selected from NOVX-associated disorder, such as cancers (e.g. leukaemia, lymphoma, melanoma or cancer of the liver, lung, muscle, ovary, testis and uterus), neurological disorders (e.g. epilepsy, stroke, ischaemic cerebrovascular disease, Alzheimer's disease or Pick's disease), disorders disease, or goitte), gastrointestinal disorders), autoimmune diseases (e.g. allergic reactions, autoimmune hamolytic anaemia, or rheumatoid arthritis), viral, bacterial, fungal, helminthic anaemia, or rheumatoid arthritis), viral, bacterial, fungal, helminthic anaemia, or rheumatoid arthritis), viral, bacterial, fungal, helminthic used in chromosome mapping, identifying individuals from minute

Diological samples (tissue typing), and in forensic identification of a biological sample, The present sequence encodes human NOV15b, which is Li L, Wolenc AR, Vernet CAM, Eisen A, Liu X;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to novel differentially regulated genes and polypeptides encoded by them. Sequences of the invention are useful in diagnosing, staging, monitoring, prognosticating, preventing, treating or determining the predisposition to diseases or conditions such as prostate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 cancer. They may be used as molecular markers, drug targets, vaccines, in gene therapy, research, clinical medicine or forensic science. The present sequence is a differentially regulated prostate cDNA, Pc099 which codes for teneurin-2. Pc099 gene is located on chromosome 5q34
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New polynucleotide for diagnosing, staging, monitoring, prognosticating, preventing or treating, or determining the predisposition to, diseases or conditions such as prostate cancer, and for research or forensic science.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            TyrGlulleAspAlaSerLysLeuGlyGlyTrpSerLeuAspLysHisHisAlaLeuAsn 81

                                            the present threathous unescribes movel numen profeshis designated NOVX, where X is 1 to 20 e.g. NOVI. NOVX sequences can have neuroprotective, cytostatic, anticonvulsant, cerebroprotective, nootropic, cardiovascular, cytostatic, anticonvulsant, cerebroprotective, nootropic, cardiovascular, contidibateic, anticinflammatory, anticinflammator, antichacterial, funciode, immunosuppressive, anticillergic, anticinflammator, antichacterial, funciode, proteozoacide and antihelminthic activities, and can be used in gene therapy. The NOVX proteins, nucleotides or antibodies can be used in the manufacture of a medicament for treating a syndrome associated with a convert. It is a manufacture of a medicament for treating a syndroder, such as cancers of unamial lymphoma, melanoma or cancer of the liver, lung, muscle, ovary, testis and uterus), neurological disorders (e.g. epilepsy, stroke, ischaemic cerebrovascular disease, Alzheimer's disease or pick's disease, disorders (e.g. ulcerative colitis, or gastric and duodenal disorders), autoimmune diseases (e.g. ulcerative colitis, or gastric and duodenal disorders), autoimmune diseases (e.g. ulcerative colitis, or gastric and duodenal disorders), antendimmune diseases (e.g. ulcerative colitis, or gastric and protozal infections. The NOVX proteins can be used as immunogens to produce antibodies and as vaccines. The NOVX nucleotide sequences may be consed in chromosome mapping, identifying individuals from minute consequence and proteozal samples (tissue typing), and in forensic identification of a biological sample. The present sequence encodes human NOV15a, which is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               3453
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         3513

The methods and compositions of the present invention are useful for detecting, diagnosing, staging, monitoring, prognosticating, preventing and/or treating diseases and conditions relating to breast cancer, and may be used in gene therapy or antisense therapy. They can also be used in research, drug discovery, clinical medicine and forensic medicine. Sequences given in records ACC72012-ACC72074 represent polynucleotides of the invention that are differentially-regulated in breast cancer. NOTE: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New isolated human differentially-regulated breast cancer polynucleotide and polypeptide, useful for diagnosing, staging, prognosticating, preventing and/or treating diseases and conditions relating to breast
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             drug discovery; cytostatic; gene therapy; antisense therapy; regulated;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to isolated polynucleotides which are differentially-regulated in breast cancer. The methods and compositions of the present invention are useful for detecting, diagnosing, staging, monitoring, prognosticating, preventing and/or treating diseases and antisense therapy. They can also be used in research, drug discovery, clinical medicine and forensic medicine. Sequences given in records differentially-regulated in breast cancer. NoTE: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New isolated human differentially-regulated breast cancer polynucleotide and polypeptide, useful for diagnosing, staging, prognosticating, preventing and/or treating diseases and conditions relating to breast
                                                                                                                                                                                                                 gene therapy; antisense therapy; regulated;

associated transcript in a cell from a patient. The method comprises contacting a biological sample from the patient with prostate cancer-sociated polymucleotides (designated PC genes) that selectively hybridise to a sequence that is at least 80% identical to them. The prostate cancer-associated polymucleotide sequences are differentially expressed in prostate tumour fissue or in prostate cancer and are derived from the tissues of various organisms such as humans or other mammals (e.g. mice, sheep and dogs). The methods of the invention are useful for diagnosing and treating prostate cancer in mammals. The prostate cancer associated genes are useful for diagnosing or treating prostate cancer, as well as for identifying modulators of prostate cancer or agents that inhibit prostate cancer. The nucleic acid sequences are particularly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          81 AsnileGinSerGlyIleLeuHisLysGlyAsnGlyGluAsnGlnPheValSerGlnGln 100

production of other cytokines in other cell populations. The polymucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis requlating activity, tissue growth factor activity, immunomodulatory activity and activity, infinibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation. Note: Records for SEQ ID NO 2110 (AAK52581), 2111
(AAK52582) and 3666 (AAM80020) are omitted as the relevant pages from the

These sequences are useful for the treatment or prevention of numerous disorders including myelogenous leukeemia, carcinomas, melanomas, gliomas, astrocytomas, congenital neonatal alloimmune thrombocytopaenia, neurological disorders, neurodegenerative Novel polypeptides designated as FCTRX polypeptides, useful in detection, prevention and treatment of a broad range of pathological states. The invention relates to FCTRX polypeptides and the polynucleotides encoding them. The sequences of the invention are useful for the manufacture of a medicament for diagnosing and treating disorders associated with the FCTRX polypeptide, such as colorectal cancer, adenomatous polyposis coli, myelogenous leukaemia, congenital neonatal cumune thrombocytopenia, malignant ovarian tumours, malignant brain tumours, manumat ovarian tumours, malignant brain carcinoma, breast adenocarcinoma, ovarian carcinoma, melanomas, clear carcinoma, breast adenocarcinomas, neurological disorders, cell and granular cell carcinomas, neurological disorders, mental health conditions, immunological disorder trauma, familial myelodysplastic syndrome, Charcot-Marie-Tooth neuropathy, Gardner syndrome, mental health conditions, immunological disorders, allergy and infection, asthma, lung diseases, male and female reproductive disorders, deafness, glycoprotein deficiency, desmoid tumour, turcot syndrome, liver dirrhosis, hepatitis c, gastric disorders, pancreatic diseases, diabetes, schistosoma mansoni infection, spinocerebellar ataxia, plasmodium falciparum infection, groenouw's corneal dystrophy and lattice corneal dystrophy. This sequence represents cDNA encoding an FCTRX polypeptide of the invention.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 1072,

## gb\_gss2:\* 29:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
